

DaTARIUS iDS Spotlight

If you need a machine and don't buy it, then you will ultimately find that you have paid for it although you don't have it. (Henry Ford)

Henry Ford hit the nail on the head with his statement: Very often the (expensive) investment in a new device is avoided by companies in order to save money. This is a misconception, because **not spending money is not always equal to saving money.** Not investing in a machine means the company will pay repeatedly for failures that could have been prevented by using the device.

In case of the instantDetectionSystem, applying it as a tool for quality assurance will reduce the manufacturing of defective discs. Companies will not have to pay for wasted production over and over again.

Customer Spotlight

Stebbing Recording Centre Ltd.

Stebbing
RECORDING CENTRE LIMITED

Stebbing Recording Centre Ltd. (NZ) purchased a CD/DVD version of the DaTARIUS instantDetectionSystem in October 2011.

Vaughan Stebbing, Managing Director is absolutely satisfied with the investment: "We are very pleased with the iDS DaTARIUS System. The tester was chosen due to the increasing numbers of small order quantities for both DVD5 and DVD9. The ability to make a quick test during replication has enabled us to reduce the number of rejects from faulty or damaged stampers.

The system compliments our other DaTARIUS testers and has certainly improved production and reduced wastage."

The **DaTARIUS instantDetectionSystem** offers you **format flexibility, high speed testing and reliability** in test results.

We are happy to report that the instantDetectionSystem (iDS) is well accepted by duplicators and studios such as Deluxe as well as optical disc manufacturers such as Cinram, EDC, Optimal and Hewlett Packard. The list of positive feedback from users all over the world is constantly growing.

The system has a convincing **list of benefits, including:** Because of the format flexibility only one unit is needed to test **all kind of formats (CD, DVD and Blu-ray)**. The **high speed testing (CD 48x, DVD 16x, Blu-ray 8x)** enables **fast reaction on playability issues** and the **video playback function** allows quick and easy location of problem areas to the content.

"Additional functions such as the **check of layer-break, multi-screen option, display of playback quality and compatibility with all region-codes** come up to our customers requirements. We are proud to offer you all of this for less than EUR 10.000,-!", Thomas Hackl, CEO of DaTARIUS.
