

DaTARIUS **iDS Spotlight**

Great things are done by a series of small things brought together.

(Vincent Van Gogh)

We constantly strive to improve our products and services - therefore a few amendments on the instantDetectionSystem were made in order to guarantee our customers enhanced work-flow. It is not only the great things that make a difference but also several combined little actions can make things better.

1. iDS-software-upgrade contract

The iDS-software-upgrade contract will give you a **full year of software updates for the iDS-system**. This includes all new versions except implementation of copy protection schemes. The iDS-software-upgrade contract is available for

EUR 480,- / USD 625,- per year.

Customer Spotlight

Audiobec Recording Canada Inc.

Audiobec Recording Canada Inc. (CA) purchased a CD/DVD version of the DaTARIUS instantDetectionSystem in January 2013.

Jim Rabchuk, Mastering Engineer,

Technical Advisor: „We absolutely love the peace of mind and the simplicity of the interface for our testing people.

What convinced us more than anything else in purchasing the iDS-10 was not only it's world accepted reputation but the fact that the device is very well thought out and is as 'bulletproof' as one can expect.

Not only does it come with a laboratory setup and stored values for reference, but the actual disc's used are part of the package for future reference. This means when in doubt, we can go back ourselves to see if something is starting to 'slip'.

The TeamViewer module enables the technicians at the DaTARIUS service center to take over the machine in the field to examine it.

We are truly proud here at Audiobec with this „sound“ investment.“

2. Optimised 6x measurement strategy for BD

To avoid higher RSER results at the outer radii in 8x speed we implemented an optimised 6x speed measurement method to the iDS software: If for a BD measurement 6x speed is selected the **drive will play the inserted disc in 8x at the inner radii and in 6x speed in the outer radii**. This guarantees **short measurement time but still minimizes the risks of higher results on certain disc effects** at the outer radii.

3. Patronus and RipGuard copy protection support implemented for DVD

The system will check for RipGuard or Patronus copy protection on the inserted DVD. All **areas** on the disc which are **effected by the copy protection are listed** and the **system will skip these areas** during all measurements.

4. Advanced Statistic view

The new Statistics page has an overview (Min,Max, Avg) of all **measured signals** will be listed **separately for layer 0 and layer 1**. Min and Max **values out of limit** will be **coloured in red**.

5. File export as CSV

In the Multi-test mode the measurement data can automatically be saved in CSV format.

Thomas Hackl, CEO: „I am sure our customers appreciate the latest software releases. In April we will start an iDS-customer survey with the goal to catch your wishes on further software features.“
